

## What did we talk about last week?

Last week, we **talked** about some ideas for Include's birthday celebrations.

We also finished working on the Easy Read about phishing attacks.

**Phishing attacks** can be **fake text** messages, **fake phone calls** or **fake emails**. These fake text messages, emails or phone calls **look real** to **trick people** to **share** their **information**.

We said that there will be a lot of **Big Give emails** this week because **every donation will be doubled via this link** [Getting to the heart of communication needs – Big Give](#). **This link is safe** and the **emails** from [include.org](#) are **safe to share**. Please do **check them** and **share them** to help us.

It is **very important** to **never give** your **bank** account **details** or **passwords** to **anyone online** or **over the phone**.

**When you are not sure** about a text or phone call, **ask someone you trust for help**.

See you at Champions today!
